COLOURS CARDS

Our universal colour cards consist of a wide range of RAL, NCS, manufacturers, Pantone, UNE, British Standard, AFNOR colours. Colour cards can be used for light and heavy industrial vehicles, as well as for corporate colours or farm machinery. Additionally, we offer a wide range of personal colours.

SOFTWARE

Color Mix System is an innovative, intuitive and easy-to-use tool, developed to find a colour formula for different INDUMIX industrial system cards. Using this tool, we can access to personal formulas in several languages and currencies, where there is the possibility to consult prices, data sheets or make weighing corrections. It consists of several label formats needed to make colours, such as the commercial label or the safety sheet. Previously authorized and registered users can set up the "COLOR MIX Software" through our web site. They will be notified of updates via e-mail. We also offer a physical version for USB memories.

EQUIPMENT

TIMED MIXER

This tool is used to mix INDUMIX concentrates in a way that they are always ready to be used. It features a dosing top helping to make precise colours and vanes mixing the concentrates. Sizes: 170 cm in high, 112,5 cm in length and 37,5 cm in width. It contains 24 dispensing lids of 4 liters and 2 dispensing lids of 1 liter.

PRECISION BALANCE

A precision balance that can be integrated into the COLOR MIX software to make colours using a cable going from the balance to the computer containing COLOR MIX software.

SPECTROPHOTOMETER

A tool used to make accurate colour measures. The aim of the spectrophotometer is to make accurate quality controls and give quick answers to customer who wish a colour different from those the formulas offered by COLOR MIX software. We can formulate and correct colours by creating a colour spectrum and get as close as possible to the requested colour.
